

## CASE STUDY – CINEWORLD, WEMBLEY

**Project Client:** ABM

**Specified products:**

Tremco Repoma system

**Duration:** 1 Week

**Area:** 60m<sup>2</sup>

## PROJECT OVERVIEW

StructureCare were tasked with waterproofing a large gutter in Wembley which had numerous leaks. A long-term solution was needed that allowed the area to be fully waterproof to halt water ingress into the cinema below. StructureCare specified and applied the Tremco Repoma system. The BBA and ETAG-certified system provides seamless waterproof protection which is sure to keep the cinema dry and free from future ingress.

The use of the liquid-applied Tremco Repoma system ensured difficult detailing and penetrations were easily overcome. Rapid installation and cure allowed for easy application and a rapid completion of the works.
